Profile

Computer Engineering graduate from ENISo (2026), specializing in Artificial Intelligence, with hands-on experience in full-stack development (web applications and APIs), deep learning, and LLM integration gained through three internships and personal projects. I enjoy building end-to-end solutions, from data processing and model development to application implementation. Seeking a full-time engineering position.

Technical Skills

- **AI / Deep Learning / LLMs:** PyTorch, TensorFlow, Prototypical Networks, Ollama, promptfoo
- **Programming Languages:** Python, JavaScript, Java, C#, PHP, C++ (Arduino)
- **Backend & APIs:** FastAPI, Flask, ASP.NET Core, Node.js (Express), Laravel, RESTful APIs, JWT authentication
- **Frontend:** React, Vue.js 3, HTML, CSS, Jinja2
- **Databases:** SQL Server, MongoDB, MySQL
- **IoT / Embedded Systems:** ESP8266 (NodeMCU), DHT11 and MQ2 (gas) sensors, embedded web server, Wi-Fi
- **Python Tools:** *ast*, Tkinter, Pillow
- **Tools & Methodologies:** Git, GitHub, Docker, Postman, Swagger, Agile Scrum, Spec-Driven Development, Android Studio, Arduino IDE, Cisco Packet Tracer, VS Code, Visual Studio

Education

Engineering Degree in Computer Science – National Engineering School of Sousse (ENISo) 2023 – 2026
Preparatory Classes for Engineering Studies – Preparatory Institute for Engineering Studies of Nabeul (IPEIN) 2020 – 2023

Professional Experience

Final-Year Internship – Sagemcom Software & Technologies Feb 2026 – Aug 2026

- Designed a maintenance platform for Sagemcom set-top box test scripts covering streaming applications, including Netflix, Amazon Prime Video, and YouTube.
- Developed an automated source-code indexer using Python, *ast*, and regular expressions, together with a unified web interface (FastAPI, Jinja2, JavaScript) to browse, filter, and fix test elements.
- Implemented six correction handlers covering different element types, with full change history and rollback support, as well as a graphical image-cropping tool using Tkinter and Pillow.
- Integrated an internally hosted LLM through Ollama into a log-analysis service built with Flask to automatically identify the element responsible for a test failure, using a preprocessing pipeline and deterministic validation to mitigate hallucinations.
- Evaluated nine language models using promptfoo to identify the most reliable model for the task.
- Applied Spec-Driven Development to generate LLM-assisted interfaces.

Full-Stack Development Internship – NEOLedge MEA Jul 2025

- Developed a web application for employee leave and expense management.
- Technology stack: ASP.NET Core Web API, Vue.js 3, and SQL Server.
- Implemented a full-stack architecture with JWT authentication and role-specific interfaces for administrators and employees.

Web Development Internship – IBH Web Consulting Jul 2024

- Developed an e-commerce website using Laravel.
- Implemented CRUD operations and designed the administration interface.

Projects

- **Gym Workout Program (HTML / CSS / JavaScript):** Web application providing workout routines for beginners.
- **Few-Shot Image Classification with Deep Learning (PyTorch):** Classification of thermal images using Prototypical Networks.
- **Pizza Pete E-commerce Application (Node.js / React):** Online ordering platform based on a microservices architecture, built as a team project.
- **Smart Home System (ESP8266 / Arduino C++ / JavaScript):** Home automation prototype featuring an embedded web server for monitoring temperature, humidity, and gas levels (with an audible alarm when a threshold is exceeded), and remotely controlling lighting over Wi-Fi. olling lighting over Wi-Fi.

Certifications

- Fundamentals of Deep Learning – NVIDIA
- Building Transformer-Based NLP Applications – NVIDIA
- Accelerating Data Engineering Pipelines – NVIDIA
